### And Fronts

The Earth has four major air masses, two cold ones and two warm ones. When those air masses run into each other, the place where they meet is called a front. Fronts are responsible for all kinds of weather like snow and storms.

Fronts are the boundaries between two air masses. Fronts are classified as to which type of air mass (cold or warm) is replacing the other. A cold front separates the leading edge of a cold air mass displacing a warmer air mass. A warm front is the leading edge of a warmer air mass replacing a colder air mass. If the front is essentially not moving

## Flashcards | Quizlet

Different types of weather fronts can produce a variety of weather conditions, both along the frontal boundary and with the air masses behind it. Because these fronts typically involve the merging of warmer and cooler air masses, wind and precipitation is common at the frontal boundaries where these air masses meet.
